## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1-22 are allowed.
2. The following is an examiner's statement of reasons for allowance: The claimed device as set forth in claim 1 including a magnetic latch, a latch pin that contacts the magnetic latch only when the head is positioned over a parking zone and which further includes a detection circuit that is used to detect contact between the magnetic latch and the latch pin is neither taught by nor an obvious variation of the art of record. The claimed method of detecting an actuator assembly parking error in a disk drive as set forth in claim 16 that includes determining whether a magnetic latch has electrical contact with a latch pin assembly is neither taught by nor an obvious variation of the art of record. The claimed disc drive as set forth in claim 21 that includes a detection means electrically connected to the actuator assembly for detecting whether the read/write head is parked in the parking zone when the disc drive is powered on is neither taught by nor an obvious variation of the art of record. It is noted that claim 21 invokes 35 USC 112 6<sup>th</sup> paragraph whereby the claimed detection means is interpreted in view of the disclosure as comprising at least the circuit arrangement depicted in figure 6 when used in combination with a magnetic latch and latch pin arrangement as depicted in figure 3.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
